

PROJECT

A 3D perspective rendering of a curved conveyor belt system. The conveyor belt is a vibrant blue color and is supported by a complex metal frame. The frame consists of multiple parallel metal rails and cross-braces, all in a light gray or silver color. The conveyor belt is shown in a smooth, 180-degree curve. At the start of the curve on the left, there is a small, rectangular, light gray control box or motor housing. Several green vertical supports or sensors are visible along the length of the conveyor, particularly at the beginning and end of the curve. The entire system is set against a plain white background.
